

PERSONAL PROTECTIVE EQUIPMENT

encompass

Better care starts
with safety and comfort.

ENCOMPASS. FIRST IN SAFETY AND COMFORT.

From coordinated apparel and comforting textiles, to innovative patient care solutions that drive compliance and improve patient outcomes, we partner with our valued customers to create warm, welcoming and healing environments.

For nearly a century, Encompass has been helping health care and hospitality organizations create safe, comfortable environments for patients, staff, residents and guests.

Whether developing advanced hypothermia-prevention products, helping hospitals contain the spread of infections, or designing interiors for new, state-of-the-art retirement communities, we offer a complete line of products, services and education programs that meet the challenges our customers face every day.

encompass

We're focused on protection so you can focus on care.

Performance, comfort and safety are key to a successful personal protection protocol in today's demanding healthcare environment. As a leader in this market, Encompass understands your needs and provides a wide selection of personal protective equipment to be integrated throughout your facility.

PERFORMANCE

The Encompass portfolio offers a wide selection of materials and products that provide choices in levels of protection, style and construction features to meet your needs in any application or procedure from basic coverage through impervious, including exclusive performance enhanced surgical fabrics such as Optiguard® and SafeGuard™.

Our performance-driven product development process combined with over 30 years of manufacturing experience delivers leading edge protective products to address general precaution areas, labs and surgical suites.

COMFORT

Materials, designs and construction methods are carefully selected by our product teams to maximize each product's comfort and life through the entire spectrum of use. All Encompass protective apparel is latex-free and generously sized to allow for comfortable movement.

SAFETY

Encompass' commitment to quality ensures all of our protective products meet or exceed established performance standards every time including three levels of AAMI classified disposable gowns which are independently tested for integrity and reliability.

Let Encompass be your guide to better protection.

Encompass protective apparel is designed to provide the best possible performance for the given application.

Encompass has developed a performance-based product classification framework to categorize our classic protective apparel according to the degree of protection afforded. To assist you in properly identifying the fluid resistance capabilities, please use the following category descriptions and look for the category icon next to the catalog numbers.

SYMBOL GLOSSARY

ICON	CLASSIFICATION	FLUID EXPOSURE RATING	SUGGESTED ENVIRONMENT
	Basic Coverage	Designed for low risk exposure. The level of fluid resistance is minimal.	Will not protect against spraying, splashing or soaking.
	Fluid Resistant	Designed for moderate exposure. The level of fluid resistance is moderate.	Protects against minimal splashing and spraying.
	Fluid Barrier	Designed for moderate to high risk exposure. The level of fluid resistance is high.	Protects from the probable occurrence of splashing, spraying and limited soaking.
	Impervious	Designed for the highest risk of exposure. Passes *ASTM-F1670, Standard Test Method for Resistance of Materials Used in Protective Clothing to Penetration by Synthetic Blood and *ASTM-F1671, Standard Test Method for Resistance of Materials Used in Protective Clothing to Penetration by Blood-Borne Pathogens Using Phi-X174 Bacteriophage Penetration as a Test System.	Protects from the probable occurrence of soaking or strike-through.

DISPOSABLE MATERIAL CODE	MATERIAL	LATEX-FREE
PE	Polyethylene	Yes
PE/SBPP	Polyethylene Coated SBPP	Yes
PE/SMS	Polyethylene Coated SMS	Yes
SBPP	Spunbond Polypropylene	Yes
SMS	SBPP/Meltblown Polypropylene/SBPP	Yes
SMMS	SBPP/Meltblown Polypropylene (2 layers)/SBPP	Yes

*American Society of Testing and Materials (ASTM)

Final selection must consider the degree of exposure risk for various procedures and be determined by the purchaser. Encompass provides no warranty against transmission of blood-borne diseases. For more information about our protection products, please contact your Encompass sales representative.

PROVIDING PARAMOUNT, SAFETY-FOCUSED PRODUCTS

Multifaceted disposable, limited-use and reusable protective products.

Encompass has designed, manufactured and marketed quality disposable, limited-use and reusable personal protection products that have been tested, proven and trusted for over 30 years.

Infection Prevention

Encompass takes the safety of you and your patients seriously and provides the quality infection control barriers you need to perform confidently and comfortably under pressure.

Proper selection of protective apparel is essential to successfully limiting exposure and reducing potential cross-contamination as rapidly emerging health threats have become the new normal for healthcare workers nationwide.

Our portfolio includes a large selection of disposable and reusable gowns configured to maximize comfort and range of motion in protection levels from basic coverage though impervious.

Understanding AAMI

The Association for the Advancement of Medical Instrumentation (AAMI) is a unique alliance of nearly 6,000 members from around the world united by one mission — to increase the understanding and beneficial use of medical instrumentation through effective standards, educational programs and publications.

Standard PB70:2003 was established by AAMI to objectively rank the barrier protection performance of gowns and drapes into four levels to provide a clear guidance for proper gown selection based on risk of exposure.

Specific testing is required to achieve each level within AAMI identified critical zones .

AAMI Level	Applicable Test	Required Result	Exposure Risk
1	AATCC 42 - Impact Penetration Test	←= 4.5 g	Minimal
2	AATCC 42 - Impact Penetration Test AATCC 127 - Hydrostatic Pressure Test	←= 1.0 g →= 20 cm	Low
3	AATCC 42 - Impact Penetration Test AATCC 127 - Hydrostatic Pressure Test	←= 1.0 g →= 50 cm	Moderate
4	ASTM F1671 - Blood-borne Pathogen Penetration Test	Pass	High

AATCC 42 - Impact Penetration Test

Measures the resistance of fabrics to liquid penetration by water spray impact. These test results predict barrier performance of an isolation gown, including critical zones, when fluids spray or splash onto it.

AATCC 127 - Hydrostatic Pressure Test

Measures the resistance of fabrics to liquid penetration by water under constantly increasing hydrostatic pressure.

ASTM F1671 - Bacteriophage Test for Surgical Gowns and Other Protective Apparel

Measures the resistance of materials to penetration of synthetic blood and blood-borne pathogens using PHI-X174 bacteriophage.

CRITICAL ZONES: Front, Back, Sleeves, Seams

The entire isolation gown, including the front, back, sleeves and seams, are considered critical zones.

Staff and Laboratory

Encompass understands the constantly changing conditions and climate of the healthcare environment and continually strives to develop innovative solutions for improved safety and comfort.

Our comprehensive offering of protective staff and laboratory apparel outfits healthcare workers against potential hazards and risk levels from basic protective coverage to fluid resistance. We have always made the products you need. Now we introduce a new generation of protective apparel you want.

NEXT GENERATION COMFORT

Thermoflect® heat reflective technology has been trusted by clinicians for over 20 years to protect at risk patients from hypothermia and is now available in our high performance staff jackets. The torso of these jackets is made of lightweight Thermoflect which is inherently impervious and retains the body's endogenous heat providing warm and comfortable protection throughout the day.

Thermoflect Heat Reflective Technology is another innovation exclusively available from Encompass. The unique construction is based on technology pioneered by NASA that uses science instead of electricity to reflect and preserve the body's radiant heat while simultaneously eliminating convective heat loss (wind chill).

Evidence based practices have demonstrated the best solution for hypothermia is prevention. For over 20 years Thermoflect has been the proactive solution of choice in the fight against hypothermia. It is specifically designed to maintain normothermia and aid in the prevention of hypothermia. This special silver material is lined with a soft blue inner surface that provides added comfort without compromising the lightweight nature of the product.

Contact your Encompass Group Sales Representative for more information on how your facility can implement a proactive hypothermia prevention protocol using Thermoflect hypothermia prevention products or visit www.thermoflect.com.

Surgical

Providing excellent protection, comfort, efficient use and durable cost effective performance makes choosing Encompass reusable surgical apparel and textiles the best cost-per-use decision.

As a demonstrated leader in surgical apparel and linens, Encompass provides a complete offering of gowns, drapes, wrappers, towels and linens for your operating room and surgical needs.

From basic coverage gowns and linens to liquid-proof protective gowns, our surgical apparel and linens are designed to provide the best possible performance for their given application.¹

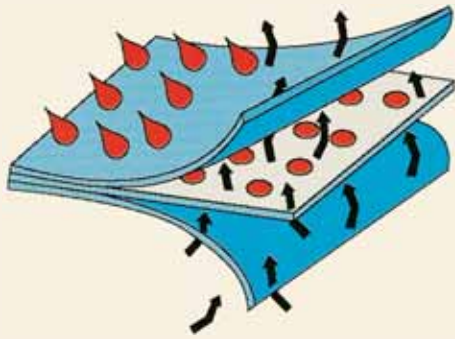

In addition to superior product selections, hospitals and surgery centers trust us to help them reduce costs and maximize efficiencies through our Clinical Resource Team and the following value-added benefits:

- Comprehensive Linen Management Support
- ExecutorNet Linen Management Software
- Cost Management Seminars
- Educational Materials

¹While the reusable surgical fabrics meet barrier-performance standards, these products are currently not yet certified for AAMI compliance.

A Guide to Encompass Exclusive Surgical Gowns

Encompass reusable surgical apparel products are available in a variety of fabrics and styles, each with a unique set of properties that make one item an optimal choice for your specific need. Please use the following descriptions as a guideline to help you differentiate the products on the following pages.

Optiguard® Tri-Laminate Fabric Surgical Gown

Our fluid-proof Optiguard tri-laminate is a special three-layer fabric composite. All three layers are bonded together using an adhesive process designed to maintain fabric integrity through sterilization.

OUTER LAYER is woven of micro-denier yarns, for softness and draping quality.

MIDDLE LAYER contains our exclusive membrane film, which is liquid-proof yet allows moisture vapor to escape, cooling the skin.

INNER LAYER is a knit fabric, which facilitates full maneuverability while feeling cool and comfortable against the skin.

Rotecno® 2000 Fabric Surgical Gown

Rotecno 2000 is constructed of tightly woven ultra-fine 99% polyester filament yarns and 1% carbon yarns. The unique construction method ensures Rotecno 2000 has 3 times greater fluid resistance than Rotecno FR and maintains superior air permeability readings when compared to other fabrics.

Rotecno® FR Fabric Surgical Gown

Rotecno FR is constructed of 99% polyester and 1% carbon yarns that are woven and treated to be fluid resistant, static-dissipative and non-linting. This fabric has exceptional air permeability ratings to improve the comfort of the gown for the wearer.

SafeCare® Fabric Critical Coverage

- Double-Ply
- Fluid Resistant
- Slip Resistant
- Static Dissipative
- Non-Linting

SafeCare Critical Coverage products are made of fluid resistant fabric that is air-textured and constructed of 99% micro-denier polyester and 1% carbon base yarns.

SafeCare® SD Fabric Surgical Gown

- Single-Ply
- Fluid Resistant
- Breathable
- Static Dissipative
- Non-Linting
- Superior Comfort

SafeCare SD products are made of fluid resistant fabric constructed of 99% micro-denier polyester and 1% carbon yarns.

Our gowns are designed to provide comfort and protection for your staff, and our commitment to quality and testing ensures that our gowns will perform to the standard specified every time.

GLOBAL MANUFACTURING AND SOURCING

Encompass has assembled a key team of manufacturing and sourcing professionals with over 150 years of combined experience in global operations. Whether it's high-tech knitting of anti-embolism stockings in Tennessee, or sourcing the latest woven and non-woven fibers and fabrics from around the world, team members are strategically located throughout the supply chain, allowing us to bring the best products we can to our customers.

In addition to our domestic manufacturing and warehousing, we operate in more than 20 countries around the world. Our long-term international partnerships result in providing you consistent product quality and reliable service at an unmatched value.

We've built a team of more than 700 dedicated professionals who specialize in all aspects of customer care, including sales representatives, customer service representatives, clinical product and education resources and interior designers.
